

CuraTerra

Environmental Services

Empowering businesses
to take care of the Earth

CuraTerra is a leading environmental services group dedicated to helping organisations understand and manage their environmental responsibilities and deliver more sustainable outcomes. Bringing together five specialist environmental divisions, we provide a broad range of expertise, services and solutions to clients across a diverse range of sectors.

Five specialist divisions, one connected team

Environmental challenges are increasingly complex and interconnected. They cross land, water, air, coastlines, workplaces and regulatory boundaries.

CuraTerra brings together five specialist environmental divisions, giving clients access to the expertise, evidence and practical support needed to understand those challenges and be supported with confidence.

Whether a challenge requires one specialist discipline or expertise from across the Group, we bring together the right people around the needs of each client.

Experts in Land & Nature

Protecting and enhancing the natural
and historic environment

Helping clients understand
environmental constraints, balance
development with nature and
heritage, and make informed
decisions that deliver long-term
environmental value.

Our Land & Nature specialists bring together
expertise across the natural, built and historic
environment to help clients understand
places, identify environmental constraints and
opportunities and deliver better outcomes.

From early surveys and environmental assessment
through design and consenting to practical delivery,
restoration and long-term management, our
teams provide expertise throughout the
environmental lifecycle.

Areas of Expertise

- Nature Services
- Historic Environment
- Water & Engineering
- Environmental Design & Assessment
- Environmental Contracting & Site Services

Experts in Marine & Coastal

Supporting sustainable marine and
coastal environments

Providing the scientific expertise,
environmental evidence and
practical support needed to
understand complex marine
environments, manage risk and
deliver projects responsibly.

Marine, coastal and estuarine environments
present complex environmental, technical, and
regulatory challenges.

The successful delivery of projects depends on a
thorough understanding of these environments,
the early identification of constraints, and the
development of robust evidence to support
informed decision-making.

Our multidisciplinary specialists support clients
from early feasibility and baseline assessment
through environmental assessment, consenting
and construction to long-term monitoring
and management.

Areas of Expertise

- Coastal Processes & Climate Resilience
- Marine & Coastal Ecology
- Marine Development, Consenting & Compliance
- Marine Dredging

Experts in Air

Understanding air pollution, managing emissions and developing solutions

Helping clients understand and tackle air pollution, monitor emissions, demonstrate compliance, and protect people through trusted technical expertise, advanced monitoring technology, and scientific support.

Our Air specialists combine testing, monitoring, technology and scientific expertise to help clients understand pollutants and emissions and make informed decisions about how they are managed.

From helping industrial operators demonstrate emissions compliance to supporting local authorities in understanding the air people breathe, we provide reliable evidence and monitoring solutions across industrial, ambient and workplace environments.

Areas of Expertise

- ▶ Ambient & Indoor Air Quality Monitoring
- ▶ Air Quality Modelling & Impact Assessment
- ▶ Continuous Emissions Monitoring Systems
- ▶ MCERTS & UKAS Accredited Emissions Testing & Compliance
- ▶ Service & Support
- ▶ Scientific & Research
- ▶ Workplace Air Monitoring

Experts in Water

Delivering intelligent water and wastewater solutions

Combining monitoring, intelligent technologies and technical expertise to help clients understand wastewater systems, improve operational performance, protect the water environment and meet regulatory obligations.

Our Water specialists combine field monitoring, environmental data, technical expertise and intelligent technology to help clients understand what is happening across water and wastewater systems.

From individual assets and industrial discharges to wastewater networks and wider catchments, we provide the evidence and insight needed to identify issues, understand their causes, enact control to optimise and make better operational, environmental and investment decisions.

Areas of Expertise

- ▶ Water Quality Monitoring
- ▶ Flow Surveys
- ▶ Flow & Load Surveys
- ▶ Water Environment Assessment & Design
- ▶ Discharge Monitoring & Compliance
- ▶ Artificial Intelligence for Wastewater Asset Optimisation
- ▶ Innovation

Experts in Management & Compliance

Managing environmental responsibility with confidence

Supporting clients to understand their responsibilities, reduce risk, demonstrate compliance and improve environmental performance.

Environmental responsibilities can be complex. Understanding what applies, what needs to be monitored or tested and what action needs to be taken can place significant demands on organisations and their teams.

Our Management & Compliance specialists provide practical advice, technical support and assurance to help clients understand their obligations, reduce risk and operate with confidence.

From environmental permits and compliance monitoring to occupational hygiene, environmental management and training, we help clients understand what is required and provide the evidence and support needed to act with confidence.

Areas of Expertise

- ▶ Environmental Compliance
- ▶ Environmental Management
- ▶ Due Diligence & Risk
- ▶ Occupational Hygiene
- ▶ Training & Competence

Environmental expertise at every stage

Supporting clients throughout the environmental lifecycle

From understanding environmental challenges to delivering solutions and supporting long-term performance, our specialists provide expertise at every stage.

Understand & Assess

Surveys, monitoring, investigation, modelling and environmental assessment to understand conditions, constraints, risks and opportunities.

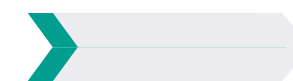

Providing the evidence needed to establish baseline conditions, identify environmental risks and opportunities and make informed decisions.

Plan & Design

Strategy, environmental design, mitigation, permitting and consenting to help projects and clients move forward with confidence.

Turning environmental understanding into practical plans and solutions that respond to project, operational and regulatory requirements.

Deliver & Monitor

Technical consultancy, field services, testing, monitoring, environmental contracting and practical support throughout delivery and operation.

Working on the ground to implement solutions, monitor performance and provide specialist support where it is needed.

Manage & Improve

Compliance assurance, environmental management, performance improvement and long-term monitoring and support.

Helping clients manage ongoing responsibilities, demonstrate compliance and continually improve environmental performance.

Trusted by organisations across the UK

From complex development and infrastructure projects to long-term environmental monitoring and compliance, we work alongside clients to solve environmental challenges and deliver better outcomes.

"Securing planning permission for a development of this scale depends on getting the ecological detail right first time. Cura Terrae's Ecology, Arboriculture, and Landscape teams worked together from the outset, so the Biodiversity Net Gain assessment, the water vole surveys, and the landscape strategy all supported one another rather than being handled in isolation. That joined-up approach gave us a strong, well-evidenced application and prevented avoidable delays. The result will be a scheme we're proud of, that gives our partner well thought-out green space at its heart."

Hoober Urban Partnerships Ltd

"The focus of ABEI's highly experienced UK team is the generation of clean energy from renewable sources, managing every step of the project lifecycle from inception through to operation. Working with a dynamic, progressive and agile multi-disciplinary company like Cura Terrae is helping us to efficiently achieve the development of these new sites, and in turn make an important contribution towards the UK's net zero goals."

Stewart Lovesey - UK Permitting Project Manager, ABEI

"Cura Terrae were appointed to our Hydrometry framework and have successfully delivered several flow measurement installations. The sites at Minto, Kames and Chell Heath presented unique challenges due to existing infrastructure, but their team worked closely with us to develop practical, innovative solutions that met our requirements and were delivered to a high standard."

**Rob Burton - Senior Hydrologist,
Mining Remediation Authority**

"Working with the team was brilliant. They were professional, courteous, and really helpful. Without a doubt, we wouldn't be where we are today if they hadn't held our hand through the entire environmental process."

**Tom Riddle - Director,
New Design Group**

NEW DESIGN | GROUP ●●●

"At Bristol Airport, Cura Terrae provides environmental services and support that we rely on across the site. Their integrated approach—combining high-quality data, proactive maintenance, and responsive expert support—ensures reliable, continuous performance. The team's professionalism and responsiveness help minimise operational disruption and keep everything running smoothly. This gives us confidence in our ability to meet compliance and reporting requirements."

**Hannah Pollard - Head of Sustainability
and Social Value, Bristol Airport**
